

PRESS RELEASE

CHIP PC PRODUCTS ARE THE FIRST THIN CLIENTS CERTIFIED FOR WATCHBOXX®, REMOTE MONITORING SOLUTION BY SCHINDLER TECHNIK

Essen, May 23, 2011

Presenting a unified solution to implement Chip PC managed thin clients in computing environments monitored by watchboxx® by Schindler Technik, providing virtualization, infrastructure and network services.

Chip PC Technologies, leader in thin client managed solutions for the cloud, and Schindler Technik AG, leader in providing virtualization, infrastructure and network services, today announced that Chip PC products are the first thin clients certified to work with the watchboxx®, Remote Monitoring Solution by Schindler Technik.

"We are happy to collaborate with Schindler Technik and provide a win-win combination for the solutions and products offered by the two companies" said Tim van Wasen, VP Europe of Chip PC, "Chip PC advanced thin clients are a perfect fit for integration with virtualization, infrastructure and network environments monitored remotely by the intelligent watchboxx solution".

"Customers using the superior advantages of Chip PC thin clients must rely on an efficient and stable infrastructure" said Fritz Gerhard, chairman Sales & Marketing of Schindler Technik. "ST.AG, a company with more than 20 years operational and project experience in the range of LifeCycle Services for information and communication solutions, offers high-quality IT services. The watchboxx® is therefore a solution which arose out of the proactive portfolio of LifeCycle Service of ST.AG", Fritz Gerhard added.

The combined solution enables IT staff to easily and remotely monitor Chip PC end user devices via a single watchboxx dashboard:

- Receive timely and updated information regards thin client guarantee coverage in order to ensure full service
- Keep real-time monitoring of server connection status of all thin clients in your network
- Get constant feedback on your entire IT infrastructure status

Driving innovation into reality, Chip PC develops and manufactures advanced thin computing solutions at the forefront of server-centric and virtualization technologies including centralized management, top security and miniature green-technology desktop devices. Chip PC and its network of value-added partners combine to deliver the most secure, scalable and performance-rich solutions in the thin computing marketplace. Chip PC partners with industry leaders Microsoft, Citrix, VMware, and others to achieve this objective. Chip PC is headquartered in Israel, with offices worldwide. Web-site: <http://www.chippc.com>

Since its foundation in 1988 ST.AG has been a leading service provider offering IT services focusing on managed LAN / WLAN Services. ST.AG is represented in six locations across Germany and handles all IT services equally. Customers make use of the added value by benefiting from the combination of both services: a two-in-one service.
